

Nursing practice in HIV/AIDS requires a complex knowledge base and range of skills, including pathophysiology, learning principles, family dynamics, grief and loss, coping with chronic illness, care of immunocompromised clients, risk assessment and risk reduction. It is important to utilize the standard of care to maintain an adequate knowledge base in this evolving field. Please complete the following steps to learn more about The Art of Nursing.

Review each module below. Please submit a certificate for each module located below to HANCB@anacnet.org.
